

Research & Development Department

8/17/2026

To Whom It May Concern,

It is my pleasure to write this letter of recommendation for José Pablo Rodríguez Pinal, who has served as an R&D Intern under my direct supervision within Nemak's Research & Development department. During his time with our team, José Pablo has consistently demonstrated strong technical ability, initiative, and a genuine drive to improve the way our department operates through digital tools.

José Pablo's core contribution has been leading the digitalization of several R&D processes using the Microsoft Power Platform. He designed and built Power Apps applications to capture and structure project data that previously lived in scattered documents and spreadsheets, and he developed Power BI dashboards that gave our leadership team clearer, faster visibility into the status of our project portfolio.

One project in particular stood out for its technical complexity and business impact: an end-to-end automation that allows any R&D team member to generate a fully formatted PowerPoint project proposal directly from a Power Apps form. José Pablo architected the complete data flow; from multi-page data capture in Power Apps, through structured storage across several related SharePoint lists, to a Power Automate flow that assembles the data, performs the required business calculations, and produces a polished, ready-to-share presentation with a single click. This eliminated a manual, time-consuming task that previously fell to our engineers and project leads, and the solution is now fully developed, representing a significant time-saving improvement for our department.

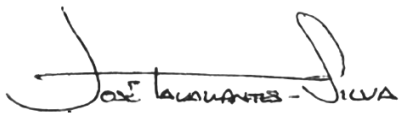

He also built automation flows in Logic Apps to support our R&D Knowledge Center, a centralized repository that organizes and surfaces reports and technical information generated across the department. His work here has made it significantly easier for our team to locate and reuse institutional knowledge rather than recreating it project by project.

Beyond his technical skills, José Pablo approached every project with curiosity and a genuine desire to understand not just how to build a solution, but why it mattered to the people who would use it. He worked independently, asked thoughtful questions when requirements were unclear, and was diligent about testing his work before putting it in front of the team.

I recommend José Pablo without reservation for any opportunity that calls for a combination of technical aptitude, process-improvement thinking, and a strong work ethic. It has been a pleasure to have him on our team, and I have no doubt he will bring the same energy and capability to future endeavors.

Please feel free to contact me directly should you require any further information.

Sincerely,

A handwritten signature in black ink, reading "José Talamantes-Silva". The signature is stylized with a large, sweeping 'J' and a long horizontal line.
